

Regional Accounts in Albania

Preface

INSTAT publishes today the first edition of "Regional Accounts in Albania" to accomplish the obligations in context of the European Union membership, which under the Association and Stabilization Agreement signed in 2006, Albania, in 2011, should produce its GDP per capita, according to the Nomenclature of Territorial Units for Statistics (NUTS II) of the European Union.

The Nomenclature of Territorial Units for Statistics (NUTS) is a uniform classification, and is used as a base for collection and processing of European regional statistics. Regional statistics are the foundation of the European Statistical System. They are used for different purposes. NUTS classification by the European Union is implemented as a standardized breakdown in purpose of:

- i) Collection, development and harmonization of statistics at regional level;
- ii) Socio-economic analysis of the regions;
- iii) For allocation of structural funds for development;

The production of additional economic regional statistics is followed by important decisions in national level and for European Union Regional Policy in the process of allocating structural funds. Regional Development of regions is linked with attracting investments based on the decision making process from available Regional Accounts Data.

The statistical information in this publication is supplemented by set of definitions and basic concepts used in National and Regional Accounts as well as maps and graphs reflecting regionalization of selected macroeconomic categories.

Detailed information on the level of economic development in regions and prefectures will be helpful in economic analyses and for monitoring changes in the structure in spatial approach.

This publication contains results of calculations of Gross Domestic Product and its components for the years 2002-2011 according statistical regions level 2 and 12 statistical regions level 3 harmonized with statistical breakdown of Territorial Units for Statistics (NUTS).

For the user, data are expressed in euro, dollars and in PPS (Power Purchaser Standard) for international comparisons effects.

Regional Accounts in Albania

1. Break down of territory for Republic of Albania by Statistical Regions

On 28-th April 2011 EUROSTAT confirmed INSTAT proposal approved by Council of Ministers¹ for regional break down of Albania in 3 statistical regions level 2 and 12 statistical regions level 3, corresponding existing prefectures. The composition of statistical regions is presented in the following table:

Regional structure in Albania according NUTS

Statistical Region level 1	Statistical Region level 2	Statistical Region level 3
Republic of Albania	North	Diber
		Durrës
		Kukës
		Lezhë
		Shkodër
	Center	Elbasan
		Tiranë
	South	Berat
		Fier
		Gjirokastrë
		Korcë
		Vlorë

The breakdown of the Albania territory is in coherence with Regulation (EC) No 1059/2003 of the European Parliament and of the Council of 26 May 2003 on the establishment of a common classification of territorial units for statistics (NUTS).

Number of population for each non-administrative unit at level NUTS II is harmonised with thresholds in Regulation of European Commission arranged minimum size 800 thousand people and maximum 3 million inhabitants.

Regions at level 3 are administrative units (Prefectures). Average number of population for level 3 is 266 201 inhabitant in year 2009 within interval from 150 to 800 thousand of inhabitants.

NUTS	Minimal number of residents	Maximal number of residents
NUTS 1	3.000.000	7.000.000
NUTS 2	800.000	3.000.000
NUTS 3	150.000	800.000

¹ Decision of C.M no.1037 date 15.12.2010 "On the implementation of the nomenclature "Albania in 3 (three) regions NUTS II" according to the Nomenclature of the Territorial Units on statistics (NUTS) of the European Union.

2. Main sources used for the compilation of regional GVA

Estimation of regional accounts is based on existing data sources used in National Accounts.

The main data sources are: statistical and administrative ones. In statistical data sources include data coming from Structural Business Survey (SBS), Survey on Agriculture and Fishing from Ministry of Agriculture and Ministry of Environment, Labour Force Survey (LFS), Price statistics, Business Register, etc. From administrative data sources are Balance sheets of enterprises, Annual report of Banking System, Insurance, State budget revenues and expenditures, etc.

Overview of main data sources which are used for the compilation of regional Gross Value Added is situated in Annex B.

3. Methodology for the calculation of Regional GVA

This part of document provides general overview about methodological principles of the calculation regional GVA, describing the sources which are used for estimations and applied methods.

3.1 Principles applicable to all economic branches

Regional accounts are a regional specification of the corresponding accounts of the national economy. Regional accounts provide a regional break down for major aggregates such as Gross Value Added by economic branches, Gross Domestic Product etc.

National Accounts concepts are used also for Regional Accounts. The estimation of Regional Accounts indicators enables regional structural differences, developments of regions become more visible.

- **Concepts and classification used**

The Regional and National Accounts in the Republic of Albania are based on the same concepts of ESA95 and NVE Rev. 1.1 classifications respectively national versus Nomenclature of Economic Activities presented in Annex A.

- **Residence Principle**

The main principle for allocation GVA in Regional Accounts is that GVA should be allocated to the region where the producer unit is resident (see ESA 95 par. 13.19 and 13.20), it means that GVA have to be allocated to region where is created.

This residence principle is particularly difficult to apply in some branches like as energy transport, etc. The main problem is allocation of GVA by multi-regional companies. During the period of estimation does not exist data sources for local units (LU) and for units which are part of companies with economic activity in more than one prefecture.

For allocation of GVA in Albania are used as regional weights, data from SBS (average wages and salaries by branch) and LFS (number of employed persons according working place by the same branch structure). Further improvements are explained in Chapter 5.

- **Treatment of ancillary activities**

At present time for ancillary activities any specific rules does not exist in Albanian statistical practice. This situation connected with fact that INSTAT has not data sources for local units.

Identification and allocation of ancillary activities to the regions where they are located would be possible after the results of Census of Enterprises Non-Financial Non-Agricultural year 2010, which enable better identification of territorial expansion of ancillary activities for enterprises that conduct their activities in many regions (prefectures).

- **The allocation of FISIM**

Allocation of FISIM indicator is in proportion with GVA regional weight by regions statistical level 3.

- **Transition from GVA to GDP**

According to EUROSTAT recommendations national taxes on products (D.21) and subsidies (D.3) are regionalized in the same structure as regional structure of GVA at basic prices (proportional allocation).

3.2 Specific methods and sources for compiling Regional GVA

The main method used in the calculations is top- down method. This method is applied by distributing the national figure in statistical regions using regional weights (keys) which is as close as possible to the variable to be estimated. The method is called top-down because the aggregate is allocated to a region and not to local units. For allocation of GVA method top-down was applied from national to regional figures, for branches of agriculture, hunting and forestry and fishing from national to regional level was used a key (regional weight) output (the value of the crop production, value of the livestock, value of the forestry and value of the fishing) of these industries.

Top-Down method was applied also for branches of mining and quarrying, manufacturing, construction, wholesale and retail trade, hotels and restaurants, transport, telecommunications, financial intermediation, real estate renting and business activities, and other community, social and personal service activities.

Weights for allocation of GVA at national level for above branches are vector product of average wages and salaries from Structural Business Survey – SBS and number of employment according working place from Labour Force Survey – LFS. Employment according working place Employment according working place accepts residence principle for allocation GVA into regions.

For branches of public administration, education and health was applied Pseudo- Bottom-Up method. This method use regional weights where data for local units are missing. For these branches was applied as a key value added - wages and social contributions from administrative sources, aggregated in regions statistical level 3, 2.

3.3 Specific methods and sources for compiling Regional GVA

In compiling indicators at constant prices, national price indices are used in deflating process according to economic branches. No regional information in prices is used in this distribution. The constant prices are estimated as in the annual national accounts, on the basis of regionally distributed previous years' prices. The same method is used in some EU member states, like Checz Republic, Denmark etc

The construction of time series, on the estimations of real growth rates of Regional GDP at statistical regions level 2 and 3 for period 2002 - 2007 by branches of the economy was applied the regional structure of year 2008 accepting inter-annual changes by branches at national level. Items like as FISIM, Taxes on Products and Subsidies have been regionalised according to Regional structure of GVA for each year.

4. Regional Accounts in Albania 2010

The estimation of Regional Accounts in Albania is based on Annual National Accounts Concepts. This is the second release of Regional Accounts in Albania and compiled in accordance with guidelines set out in ESA 95 Chapter 13- Regional Accounts. The regional indicators cover years 2002-2011 published at statistical 2 and 3 levels by 6 industries.

The publication contains indicators of Gross Value Added- GVA and GDP with current and constant prices for years 2002-2011. Regional macroeconomic estimates are available for 3 Statistical Level 2 regions and 12 Statistical Level 3 called prefectures. Estimates are consistent with EUROSTAT recommendations.

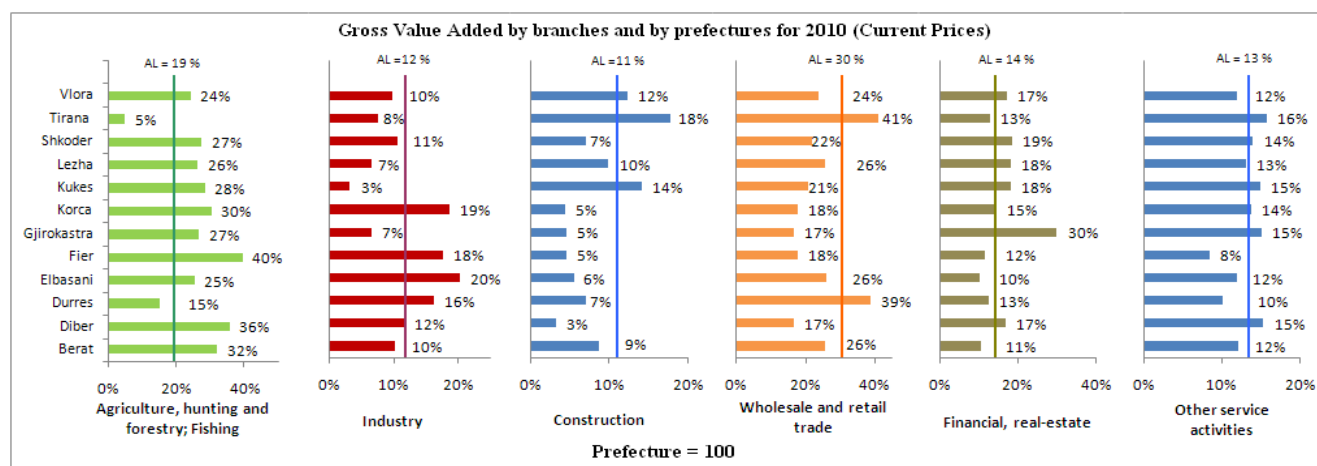

4.1 Gross Value Added by branches and by prefectures year 2010

In 2010, the value of Gross Domestic Products was 1,282,255 million lek. In comparison to 2010 it grew by 3.1 %. at current prices. Presented in this paragraph are the growth rates of statistical regions.

The real GDP was increased in all Albanian Statistical Regions Level 2, although there is a variation in the rate of increase between regions. Region North increased by 2.0 % in comparison to 2010, region South at 3 % and Center at 3.7 %.

In Statistical Region Level 3 breakdown of real growth of GDP varied from -0.8 % in Shkodër region to 11.0 % in Kukës region.

The largest changes in growth rates occurred in regions with small share of the total GDP, like the case of Gjirokastrër.

In the above graphs are specific weights of GVA for main branches of the economy in rapport with the total of economic activities for each prefecture. This are compared with the weight of specific branch to national economy. This indicator is considered as national average.

For example in year 2011, **the branch of agriculture and fisheries** in generating total gross value added was 19.5% of the total economy or 0.2% higher than in 2010. According to the prefectures, weight in agriculture, hunting and fishing varies from 5% to 37% in Tirana to the prefecture of Fier. Most prefectures in the agriculture, hunting and fishing in the generation of gross value added is above the national average.

Branch of industry was 12% of total gross value added or 0.3% higher than in 2010. According to the prefectures, in the branch of industry weights ranged from 3% in Kukës to 21% in the prefecture of Fier. Prefectures with most part of industry in generating gross value added above the national average are mainly Fier, Elbasan, Korça and Durres.

Construction branch was 10.7% of gross value added or 0.3% lower than in 2010. by prefectures, weight in construction ranged from 4% in Dibër to 17% to Tirana prefecture

Branch trade, hotels, transport and communications was 31.1% of national gross value added or 0.6% higher than in 2010. According to the prefecture, the weights for this branch ranged from 16% in Gjirokastrë to 42% in Tirana prefecture.

Prefectures with the trade, hotels, transport and communication in generating gross value added above the national average are Durres and Tirana.

Branch of Financial intermediation, Real Estate, etc., was 13.9% of total gross value added or 0.2% lower than in 2010. According to the prefectures, in this branch weights ranged from 10% in Elbasan to 29% in Gjirokastra Prefecture. In some prefectures (Gjirokastra, Shkodra, Lezha, Kukës and Dibra) part of this activity in the generation of gross value added is above the national average

Other Services Branch including public administration and defense, etc. was 12.8% of total gross value added or 0.6% lower compared to 2010. According to the prefecture, in this branch weights ranged from 8% in Fier to 16% in Tirana prefecture. Most prefectures in this branch are roughly in the same level with the national average.

- **Share of GDP by statistical regions level 2,3 year 2011**

In year 2011 specific weight of Centre Region of total GDP for Albania was 45.6 % followed by South Region with 29.8 % while North Region was 24.7 %.

In statistical level 3 the lowest share on GDP was in prefecture Kukës at 2.4 % while the largest share was in prefecture of Tirana at 36.3%.

GVA, GDP at current prices, year 2011 by Statistical Regions Level 2/3

Statistical Regions level 2 / 3		GDP Current price (million lek)	GDP Current price (million Euro)	GDP Current price (million USD)	Share of AL (%)
AL	The Republic of Albania	1,282,255	9,137	12,708	100
AL01	<i>North</i>	316,504	2,255	3,137	24.7
AL011	Dibër	39,953	285	396	3.1
AL012	Durrës	120,528	859	1,195	9.4
AL013	Kukës	31,321	223	310	2.4
AL014	Lezhë	46,827	334	464	3.7
AL015	Shkodër	77,875	555	772	6.1
AL02	<i>Center</i>	584,174	4,163	5,790	45.6
AL021	Elbasan	118,474	844	1,174	9.0
AL022	Tiranë	465,700	3,319	4,615	36.6
AL03	<i>South</i>	381,577	2,719	3,782	29.8
AL031	Berat	61,188	436	606	4.8
AL032	Fier	125,812	897	1,247	9.8
AL033	Gjirokastrë	34,178	244	339	2.7
AL034	Korçë	80,227	572	795	6.3
AL035	Vlorë	80,173	571	795	6.3

4.2 Unique Position of Tirana in the Republic of Albania

The Albanian Capital Tirana among 12 administrative regions is exceptional. Here are allocated the majority of government institutions and headquarters of the majority of multiregional² companies.

In 2011, 26.42 percent of the population lived in Tirana with 36.3 percent of the national GDP.

Some of the main factors are the concentration gross value added of construction branch, the concentration of services sector (banking, insurance, and telecommunications), high compensation of employees and high rate of commuting from other prefectures.³

4.3 Diversity of statistical regions level 2

Statistical Regions in Albania North, Center and South have different demographic characteristics, industrial structure and economic performance.

Region North has 37.9% of Albanian territory, the second largest area with a population of 29.85 % of the total.

Region Center has 16.9% of Albanian territory, but the largest percentage of population at 37.01 % of the total while region South has the largest area at 45.2 % with a population of 33.14 % of the total.

These variations in regional populations are reflected in the size of regional GVA and income. The wide variation in the size of the regions makes it difficult to compare the regional economic performance using absolute values. The diversity is measured by using terms of amounts per capita of population.

Economic growth may have variation from growth per capita in regions where population has increased or decreased.

² Enterprises that have activities in more than one prefecture

³ Commuters - People who work in one area and live in another ex. Tirana and Durrës

Regional Indicators year 2011

Statistical Regions		Surface	Population 2011	Density of population
		km ²	nr	inhabitant/km ²
Level 1	Albania	28,748	2,829,336	98.42
Level 2	North	37.90%	29.85%	77.5
	Center	16.90%	37.01%	215.5
	South	45.20%	33.14%	72.2
Level 3				
North	Dibër	9.00%	4.95%	54.2
	Durrës	2.70%	9.29%	338.7
	Kukës	8.30%	3.07%	36.4
	Lezhë	5.60%	4.80%	84.3
	Shkodër	12.40%	7.74%	61.4
Center	Elbasan	11.10%	10.59%	93.9
	Tiranë	5.70%	26.42%	456.1
South	Berat	6.30%	5.12%	80.0
	Fier	6.60%	11.16%	166.4
	Gjirokastër	10.00%	2.64%	26.0
	Korcë	12.90%	7.92%	60.4
	Vlorë	9.40%	6.30%	66.0

5. Improvements in data sources

- **Census of Enterprises**

Main activity for quality growth of estimates and for further improvement of the methodology for the compilation of Regional GVA in Albania is application results of New Business Register Census for Non-Agriculture Enterprises. With results from Census of Enterprises will be possible additional information for multi-regional companies (turnover, persons employed by regions, wages etc.). This Census will be helpful especially for identification of Local Units in multi-regional companies and for allocation of respective estimates.

- **Census of Population**

Through this activity will be possible detailed information about employment by branches as an additional indicator for regional breakdown for companies that have activities in more than one region. Results from this Census are crucial in the process of calculation and quality of GVA and GDP per capita figures providing a benchmark for population estimates.

- **Census of Agriculture**

The census of Agriculture will cover detailed information for agricultural sector providing information for regionalizing GVA by statistical regions.

- **Enlargement of Structural Business Survey**

The enlargement of Structural Business Survey will provide additional data for regional module especially for multiregional enterprises with information about: Local units, number of employed people, wages and data on volume of construction activities (investments).

In this survey will be possible the collection of detailed information about size of enterprises in annual basis.

5.1 Enlargement of Regional Accounts

After implementation of basic macroeconomic indicators by regions including the compilation of Regional GVA by branch and Regional GDP, NSTAT will focus on following topics of regional estimates like Regional Gross Fixed Capital Formation, Regional Government Expenditure etc.

6. Publication, Revision policy

Regional Accounts in Albania will be published each year after the publication of Annual National Accounts. The official date, according to the official calendar of publications, is the end of July. Annual estimates of GDP, Regional Accounts and their components are subject of revisions.

Main revisions are linked with the methodology used, due to changes in the concepts, definitions and classifications used or with improvement of statistical sources.

Due to the fact that Regional accounts are a regional specification of the corresponding Annual National Accounts all changes in annual national level are reflected also in Regional Accounts.

The publication will be available on the INSTAT official website www.instat.gov.al

Annexes

Annex A. Nomenclature of Economic Activities

Code		Branch	
NVE Rev.1.1			
A	1	Agriculture, hunting and forestry	Agriculture, hunting and forestry
B	2	Fishing	Fishing
C	3	Mining and quarrying	Mining and quarrying of energy producing materials
	4		Mining and quarrying of except energy producing materials
D	5	Manufacturing	Manufacture of products based on cereals
	6		Other manufacture of food products
	7		Manufacture of textile and leather products
	8		Manufacture of wood, paper, furniture; publishing and printing
	9		Manufacture of coke, refined petroleum products and nuclear fuel
	10		Manufacture of chemicals, chemical products, rubber and plastic products
	11		Manufacture of other non-metallic mineral products
	12		Manufacture of basic metals and fabricated metal products
	13		Manufacture of machinery and equipment
E	14	Electricity, gas and water supply	Electricity, gas supply, water
F	15	Construction	Construction
G	16	Wholesale and retail trade; repair of motor vehicles, motorcycles and personal and household goods	Trade
H	17	Hotels and restaurants	Hotel and restaurants
